

**Dear patients/parents, this document is meant to explain in detail the definition of a Well Woman Exam at our office and all the services being rendered during a Well Exam. We would like to ensure that we are being transparent as possible to help you understand the difference between a Well Woman Exam and Problem Visit. Healthcare services are constantly changing and we have been asked by both Private and Public insurances to ensure our Providers follow protocol. If you have any questions at any time, please request further explanation, which we are happy to provide. All of us here at My ObGyne, thank you for your continued trust in allowing us to care for you and your loved ones.**

**Well Woman Exam**

A Well Woman Exam appointment is a visit which the patient has no medical concerns at that time. The Providers will conduct a complete physical exam, help educate patient/parent on preventing illness, safety and nutrition.

**Problem Visit**

A Problem Visit is held when the patient/parent has a new concern and/or the Providers have discovered a symptom while the patient is in the office.

Please be advised, if you are in the office for a Well Exam and the patient/parent voices additional concerns or the Provider discovers any new concerns (i.e illness, rash, acute or chronic sickness) or any additional time must be spent regarding a diagnosis, prescriptions, referrals or additional education on concerns/illness not part of the Well Exam, the visit will become a Problem Visit and will be charged as such. If at the time of the Well Exam you have additional concerns, you have the option to schedule a separate appointment to discuss those concerns. You must inform the provider at the time if you prefer a separate appointment.

I, \_\_\_\_\_, patient/parent/guardian have read the above statement and understand I will be financially responsible for any additional fees associated with a Well Exam turned into a Problem Visit.
